

Testing

Why is it important?

1. to point out defects and errors that were made during the development phase
2. to ensure the quality of the product
3. necessary in order to provide the facilities to the customers
4. to ensure that the application should not result into any failures

Logo cypress.io

Built on top of:

Mocha - fits perfectly for both integration and unit testing

Chai - gives the ability to easily write BDD and TDD assertions

In Cypress we can run all types of tests:

- Unit tests
- Integration tests
- End-to-end tests
